REASONS FOR ALLOWANCE

1. Claims 1-17 are allowed. The following is an examiner's statement of reasons for allowance:
2. The applicant's claims are directed to a slurry composition which contains a sulfur bearing compound capable of converting copper to copper sulfide (i.e. cupric sulfide).
3. Although the chemical reaction of copper to copper sulfide is well known in various other fields such as processing raw ore or etching aluminum, such reactions are not known for use in planarization using a slurry. A slurry is defined as "a thin water suspension." None of the prior art uses these copper sulfide reactants in such a thermodynamic state. In fact, the prior art makes efforts to avoid non-soluble compounds especially in etching.
4. The closest prior art was found to be Rooney (US 4,116,699), Kawaguchi (US 5,953,628), Komai et al (US 6,709,979).
5. Rooney teaches polishing compositions containing the cupric sulfide, but fails to teach the formation of this compound during chemical mechanical polishing and the slurry state.
6. Kawaguchi teaches the formation of copper sulfides using ammonium sulfide in the manufacturing of semiconductors. However, Kawaguchi fails to teach these compositions in the form of a slurry.
7. Komai teaches an electrolytic plating composition containing copper sulfide. Komai however fails to teach the formation of the copper sulfide or the use of this compound in a slurry.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue

fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
